

Environment promoting sound energy management and reducing greenhouse gas emissions, promoting good water, waste and raw materials management, and addressing biodiversity/ecological impacts.

Social promoting good labour practices and relations, maximising employee health and safety, supporting diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund has a financial benchmark that is used for portfolio construction but does not incorporate any sustainable criteria and is not selected for the purpose of attaining these characteristics. This financial benchmark is used as a comparator for Fund performance and

● **What Sustainability Indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

Our approach positively identifies issuers which promote the above E&S characteristics, seeking to ensure that at least 90% of the portfolio is aligned with the E&S characteristics identified. We do this by tracking the below sustainability indicators which allow us to measure the attainment of the E&S characteristics the Fund is promoting:

Sustainability Indicator – Screening Criteria

Pre investment, abrdn applies a number of norms and activity-based screens to ensure that severe, lasting or irremediable harm is avoided. Binary exclusions are applied to exclude the particular areas of investment of concern. Our exclusions are informed by the Principal Adverse Impact Indicators, but not limited to them. The criteria include investments related to the UN Global Compact (PAI 10), State Owned Enterprises (SOEs), Weapons (PAI 14), Tobacco, Thermal Coal, Oil & Gas and Electricity Generation.

Sustainability Indicator – Environment, Social & Governance Performance

Our proprietary ESG House Score, developed by our central ESG investment team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks.

The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. This allows us to see how companies rank in a global context. The score assesses many different Environmental, Social & Governance issues, however, specifically assesses the following characteristics: energy, greenhouse gas emissions, renewable energy, raw materials, biodiversity/ecological impacts and circular economy, labour practices and relations, employee health and safety and supply chain management.

The Fund will exclude at least the bottom 10% of issuers with an ESG House Score that are in the benchmark.

Sustainability Indicator – Avoiding Poor ESG Business Practices

Our credit analysts apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. The key area of focus is the materiality of the inherent Environmental and Social risks of the sector of operation and how specific companies manage these risks, combined with the quality and sustainability of its corporate governance. This materiality assessment is combined with a judgement on the timeframe over which these ESG risks may have an impact. Our analysts utilise an ESG Risk Rating Framework to support making these assessments.

This is a proprietary tool designed to help focus the knowledge and expertise of credit analysts in a systematic way to substantiate the overall ESG Risk Rating (low/medium/high) assigned to debt issuers.

The Fund will exclude companies with a High ESG Risk Rating.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate sustainable objective and it is this element that is weighted and counted towards the

abrdn uses a combination of the following approaches:

i. a quantitative methodology based on a combination of publicly available data sources; and

ii.

abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti - corruption and anti - bribery matters.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause investment objectives.

abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration, Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails

weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable

& 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR

improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue.

- → How have the indicators for adverse impacts on sustainability factors been taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs:, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.

Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis

Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.

On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

- → How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

Some investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, this Fund considers Principal Adverse Impacts (PAI) on sustainability factors.

Principal adverse impacts consideration

Yes, the Fund commits to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

PAI 1: GHG emissions (scope 1 and 2)

PAI 10: Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

company carbon intensity and GHG emissions is considered via our ESG integration risk analysis.

On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis. abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

Governance indicators are monitored via our proprietary governance scores and risk frameworks, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund.

PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for engagement. These PAI indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

No

What investment strategy does this financial product follow?

The Fund seeks to:

Generate consistent risk-adjusted outperformance using our active management approach of stock selection tailored to the overall environment.

Benefit from our active engagement with companies, where we encourage positive changes in behaviour.

Construct a portfolio that invests in issuers with strong ESG practices.

Leverage the support and insights of our large, dedicated Fixed Income team and

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements of the strategy include:

1. A commitment to hold a minimum of 90% of the assets aligned with E/S characteristics and within these assets, to hold a minimum of 40% of assets that
2. A commitment to apply binary exclusions to exclude the particular areas of investment related to the UN Global Compact, State Owned Enterprises (SOEs), Weapons, Tobacco, Thermal Coal, Oil & Gas and Electricity Generation.
3. A commitment to exclude at least the bottom 10% of issuers with an ESG House Score that are in the benchmark.
4. A commitment to exclude any issuer with a High ESG Risk Rating.
5. A portfolio carbon intensity target with the following milestones vs. a baseline of the benchmark level carbon intensity as of 31st December 2019: a. At least 25% lower by 31st December 2025. b. At least 55% lower by 31st December 2030.
6. An ESG rating that is better than or equal to the benchmark.

These elements apply in a binding manner and on an ongoing basis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Fund excludes companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 10% of issuers with an ESG House Score that are in the benchmark. The Fund also aims to reduce the investment universe by a minimum of 15%.
