

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name:

abrdn SICAV I - Global Climate and Environment Equity Fund

Legal entity identifier

213800IA6FFNPXL5L927

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Does this financial product have a sustainable investment objective?

☒ Yes

☐ No

☒ It will make a minimum of **sustainable investments with an environmental objective**: 20%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It will make a minimum of **sustainable investments with a social objective** 5%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the sustainable objectives of this financial product are attained

What is the sustainable investment objective of this financial product?

The Investment objective of the Fund aims to provide long term growth to be achieved by investing in global equity and equity-related securities including Emerging Market countries that develop or use products and services designed to maximize resource efficiency, support the transition to a low carbon economy and address wider environmental challenges.

The Fund draws on abrdn's deep resources and understanding of climate and environmental issues to help our clients benefit from the long-term shift towards greater sustainability. The fund seeks to generate strong long-term performance by investing in companies that develop or use products and services designed to drive resource efficiency, support the transition to a low-carbon economy and address the wider environmental challenges we face.

Our climate and environment proposition:

- Focus on the areas in the market with strong long-term growth potential driven by the economy and society's ability to address its impact on the climate and environmental issues.
- Invest in companies generating attractive returns by delivering environmental solutions

- or leadership that supports the transition to a more sustainable future.
- Driving enhanced investment decisions by leveraging the strength, depth and diversity of abrdn's global research platform and integrated approach to ESG.

The transformation to a low-carbon, more sustainable environment will touch all aspects of society and economic activity. The Global Climate and Environment Equity Fund aims to support and benefit from these growing long-term structural dynamics by investing in companies across five key pillars, structured to reflect the key areas where society and the economy can positively address our impact on the climate and environment.

This Fund has a financial benchmark that is used for portfolio construction but does not incorporate any sustainable criteria and is not selected for the purpose of attaining these characteristics. This financial benchmark is used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

● ***What Sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

This approach identifies companies delivering a positive change through the products and services they provide in those areas of the economy that directly influence the environment and emissions, and also identifies companies delivering a positive impact through leading operational performance with respect to emissions, resource efficiency or waste-minimisation compared to peers.

The approach also reduces the investment universe by a minimum of 20%.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives.

abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration, Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm".

Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Abdrn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti - corruption and anti - bribery matters.

- → *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

- → *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, this Fund considers Principal Adverse Impacts (PAI) on sustainability factors.

Principal Adverse Impact Indicators are metrics that measure the negative effects on environmental and social matters. abrdn consider PAIs within the investment process for the Fund, this may include considering whether to make an investment, or they may be used as an engagement tool for example where there is no policy in place and this would be beneficial, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan. abrdn assess PAIs by using, amongst others, the PAI indicators referred to in the SFDR Delegated Regulation; however, dependent on data availability, quality and relevance to the investments not all SFDR PAI indicators may be considered. Where Funds consider PAIs, information on that consideration will be made available in annual reports.

No

What investment strategy does this financial product follow?

The Fund draws on abrdn's deep resources and understanding of climate and environmental issues to help clients benefit from the long-term shift towards greater sustainability. The Fund seeks to generate strong long-term performance by investing in companies that develop or use products and services designed to drive resource efficiency, support the transition to a low-carbon economy and address the wider environmental challenges faced.

Our climate and environment proposition:

- Focus on the areas in the market with strong long-term growth potential driven by the economy and society's ability to address its impact on the climate and environmental issues.
- Invest in companies generating attractive returns by delivering environmental solutions or leadership that supports the transition to a more sustainable future.
- Driving enhanced investment decisions by leveraging the strength, depth and diversity of abrdn's global research platform and integrated approach to ESG.

The transformation to a low-carbon, more sustainable environment will touch all aspects of society and economic activity. The Global Climate and Environment Equity Fund aims to support and benefit from these growing long-term structural dynamics by investing in companies across five key pillars, structured to reflect the key areas where society and the economy can positively address our impact on the climate and environment.

In addition, abrdn apply a set of company exclusion which are related to normative screening (UN Global Compact, ILO and OECD), Norges Bank Investment Management (NBIM), State Owned Enterprises (SOE), Weapons, Tobacco, Gambling, Alcohol, Thermal Coal, Oil & Gas and Electricity Generation.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The approach identifies companies delivering a positive change through the products and services they provide in those areas of the economy that directly influence the environment and emissions, and also identifies companies delivering a positive impact through leading operational performance with respect to emissions, resource efficiency or waste-minimisation compared to peers.

Our five key pillars are divided into two broad groups of companies: those delivering solutions and those providing leadership:

1. How we source and power

Environmental solutions in power generation and sourcing of key resources

2. How we build

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Sustainable urbanisation and infrastructure

3. How we transport

Sustainable and efficient Transportation

4. How we make and use

Environmental solutions in the life cycle of a product or service

5. How companies operate

Companies leading the drive for environmental efficiency among their peer group

Our first four pillars focus on identifying companies delivering a positive change through the products and services they provide in those areas of the economy that most directly influence the environment and emissions. Core to each of these pillars is the ability of the products and services to assist in either reducing emissions, improving resource efficiency or cutting waste and pollution – ultimately enabling society to transition to a lower carbon, more environmentally sustainable economy.

Our fifth pillar, 'How companies operate', provides a crucial link in addressing society's influence on the environment. If society and the economy are to successfully shape our future relationship with the planet, environmental sustainability must be embraced across industries.

By identifying companies that deliver a positive impact through leading operational performance with respect to emissions, resource efficiency or waste-minimisation compared with peers, the fund completes that circle. Such companies not only play a key role in lowering society's impact on the environment, but they also create new market opportunities, lower operational costs, reduce the threat of tail risks, build positive reputation and brand awareness, and potentially lower their cost of capital – a powerful and financially beneficial combination.

abrdn apply a set of company exclusion which are related to normative screening (UN Global Compact, ILO and OECD), Norges Bank Investment Management (NBIM), State Owned Enterprises (SOE), Weapons, Tobacco, Gambling, Alcohol, Thermal Coal, Oil & Gas and Electricity Generation

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

For this Fund, the investee company needs to follow good governance practices in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This can be demonstrated by the monitoring of certain PAI indicators, for example corruption, tax compliance and diversity. In addition, by using abrdn's proprietary ESG scores within the investment process abrdn screen out any investments with low governance scores. Our governance scores assess a company's corporate governance and management structure (including remuneration of staff policies) and the quality and behaviour of its leadership and management. A low score will typically be given where there are concerns in relation to financially materially controversies, poor tax compliance or governance concerns, or poor treatment of employees or minority shareholders.

The investment must further be aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process.

What is the asset allocation and the minimum share of sustainable investments?

The Fund commits to a minimum of 75% in Sustainable Investments, including a minimum commitment of 20% to assets with an environmental objective and 5% to social objectives.

The Fund invests a maximum of 25% of assets in the “Non Sustainable” category, which is mainly made up of cash, money market instruments and derivatives.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● How does the use of derivatives attain the sustainable investment objective?

The Fund will not use derivatives to attain any sustainable investment objective.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund has not set a minimum proportion of investments in Taxonomy aligned economic activities. This graph represents 100% of the total investment.

● Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy ?¹

Yes

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy alignment of investments including sovereign bonds*

2. Taxonomy alignment of investments excluding sovereign bonds*

This graph represents 100 % of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

Not Applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

are environmentally sustainable investments that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Fund draws on abrdn's deep resources and understanding of climate and environmental issues to help our clients benefit from the long-term shift towards greater sustainability. The fund seeks to generate strong long-term performance by investing in companies that develop or use products and services designed to drive resource efficiency, support the transition to a low-carbon economy and address the wider environmental challenges we face.

The transformation to a low-carbon, more sustainable environment will touch all aspects of society and economic activity. The Fund aims to support and benefit from these growing long-term structural dynamics by investing in companies across five key pillars, structured to reflect the key areas where society and the economy can positively address our impact on the climate and environment, which result in the Fund committing to a minimum 75% to sustainable investments which are inclusive of both environmental and social objectives that aren't explicitly taxonomy aligned. The minimum share of sustainable investments with an environmental objective is 20%.

What is the minimum share of sustainable investments with a social objective?

Fund draws on abrdn's deep resources and understanding of climate and environmental issues to help our clients benefit from the long-term shift towards greater sustainability. The fund seeks to generate strong long-term performance by investing in companies that develop or use products and services designed to drive resource efficiency, support the transition to a low-carbon economy and address the wider environmental challenges we face.

The transformation to a low-carbon, more sustainable environment will touch all aspects of society and economic activity. The Fund aims to support and benefit from these growing long-term structural dynamics by investing in companies across five key pillars, structured to reflect the key areas where society and the economy can positively address our impact on the climate and environment, which result in the Fund committing to a minimum 75% to sustainable investments which are inclusive of both environmental and social objectives that aren't explicitly taxonomy aligned. The minimum share of sustainable investments with a social objective is 5%.

What investments are included under “#2 Not sustainable”, what is their purpose and are there any minimum environmental or social safeguards?

The Fund may invest in securities that are not deemed sustainable including cash, money market instruments and derivatives but only for the purpose of hedging and liquidity management.

There are certain environmental and social safeguards that are met by applying PAI's. Where relevant, these are applied to the underlying securities. Many pre-investment PAI indicators are considered but below are the ongoing post-investment PAI indicators that continue to be considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

Not applicable

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

Not applicable

- ***How does the designated index differ from a relevant broad market index?***

Not applicable

- ***Where can the methodology used for the calculation of the designated index be found?***

Not applicable

Where can I find more product specific information online?

Fund specific documentation, including Sustainability Related Disclosures, are published at www.abrdn.com under **Fund Centre**.

More product-specific information can be found on :
