The fund may invest in a range of different asset classes, which may help mitigate the effect of poor performance in any one asset class, however exposure to equities may be up to 100% of the fund value. Exposure to emerging markets equities will not exceed 20% of the fund value.

Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 5 because its volatility has been measured as above average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.
- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Please note that even funds with the lowest rank may lose you money.
- In addition to the level of risk shown by the indicator, there are other risks associated with this fund, as detailed below:
- The fund invests in equities, and the value of these may fall or rise due to a number of factors, including the performance of the company and general stock market and exchange rate fluctuations. Fixed interest securities may fall in value if there are declines in credit quality or rises in interest rates. Changes in exchange rates will affect the returns on your investment. The value of your investment may rise or fall and you could get back less than you invest.
- Attention is also drawn to risks associated with portfolio concentration, investing in Exchange Traded Funds and the Temporary Suspension of Shares of Underlying Collective Investment Schemes.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' below.
